## Product Details Interface Page connected to Report Dashboard Page

### PRODUCT DETAILS

#### Product ID

B09WN3SRC7

#### Product Name

Sony Bravia 164 cm (65 inches) 4K U...

#### Category Name

Electronics

#### Sub-Category Name

SmartTelevisions

#### Sub-Category Rating

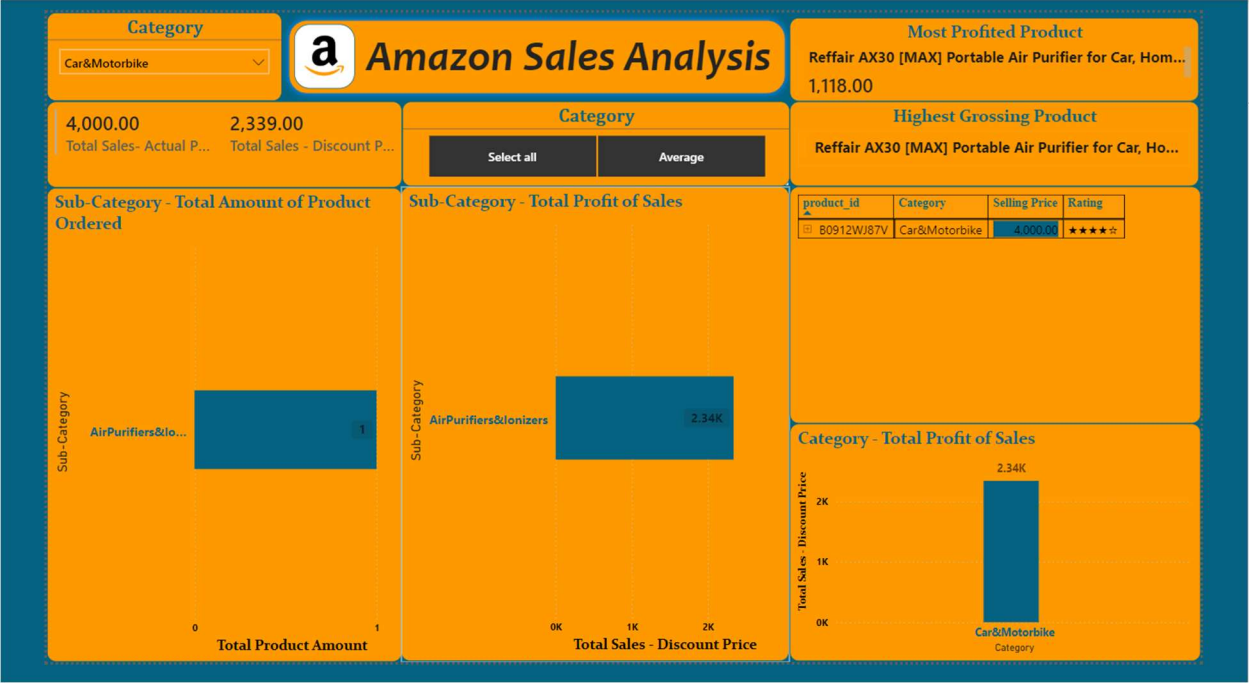

5,935.00

#### Sum of rating\_count

This is how the interface of the Product Details Interface Page works on the Report Dashboard Page

There is a category slicer to select the desired category or combinations of categories you want to view.

You can make multiple selections if you look at the slicer you can see stating multiple selection

The interactive tool from the Product Details Interface Page works well on the Report Dashboard Page, even though we selected different combinations from the category. We demonstrated the total sales of the Discounted Price and Actual Price through KPI, and the other KPIs have the Most Profited Product and Highest Grossing Product; these change accordingly to the categories.

The Product Details Interface shown in the Product Details Table

If we look at the Product Details Table, we can see product\_id, Category, Selling Price, and Rating on the Report Dashboard page. The Product Details Interface we created on the Product Details Interface Page is connected to the Report Dashboard Page using ToolTip in Product Details Visualization. This interface shows the details that aren't shown in the table, which are Product Name, Sub-Category Name, and Sub-Category Rating (it shows the Total Number of Ratings for that product).

There is another category of slicer which has Good, Average, and Low

If the Rating:

- less than or equal to 3.9 is Good.
- less than 3.9 and more than or equal to 2.9 is Average
- less than 2.9 is Low.

So, if we choose the respective Category Slicer the products related to it would be displayed and multiple selections are also allowed.

## Average

## Good

## Low
